

***Founded in 1990, Farmer Environmental Services, LLC (FES),** helps clients throughout the United States and Canada recognize, understand and resolve their environmental issues. Whether testing for the presence of mold, asbestos, lead or other harmful contaminants, FES and its dedicated staff of consultants will*

find a fast, safe, and economical solution. Located in Edwardsville, Illinois, FES is a leader in the environmental testing industry and has served clients in a variety of sectors, including business, industrial, education, government and residential.

No project is too big or too small for FES. Our staff of dedicated consultants has a broad

range of knowledge and experience in the construction industry and building systems. If there is an environmental concern, we will find it, help you understand it and guide you back in the right direction towards safety.

Our Approach

Our Clients

How We Help...

Most people know that exposure to environmental contaminants such as asbestos, lead, mold and other toxins such as radon, silica, mercury and arsenic are harmful to your health. For example, lead exposure can cause severe health defects in children such as learning disabilities, seizures and even death. And, according to the Environmental Protection Agency, 60 percent of the buildings in the United States have poor indoor air quality due to mold, asbestos and other harmful substances found in building materials or internal ducts and wall pockets. But, what most people do not know, is how to properly eliminate or avoid harmful contaminants in their homes or commercial space before they pose a serious health risk. That's where FES can help.

Our Staff Gets the Job Done Right...

FES prides itself on its outstanding staff of qualified, professional environmental consultants and its state-of-the-art, full-service testing laboratory. All of our consultants are licensed by the Missouri Department of Natural Resources and the Illinois Department of Public Health. FES can also manage projects throughout the rest of the United States and Canada. In these instances, we work in association with a local consulting firm to perform the work while FES coordinates and oversees the project. When FES takes on a project, every aspect of the job is managed closely. We monitor the budget and make sure the job is done right and on time.

Our laboratory...

The FES in-house laboratory allows us to provide comprehensive testing services for asbestos, arsenic, IAQ/Mold, Mercury, lead, radon and silica. Our laboratory is a successful participant in the Proficiency Analytical Testing Program (PAT), which is administered by the American Industrial Hygiene Association (AIHA) using National Institute for Occupancy Safety and Health (NIOSH) methodology. We perform analysis on both air and bulk asbestos samples and can provide results in as little as six hours.

With safety at top of mind, FES and its clients work together to make sure their homes, schools, office buildings, and industrial properties are safe for occupancy.

We Can Help

Asbestos Services

- Inspections
- Project Management
- Air Sampling
- Asbestos Abatement Project Design – Bidding Assistance & Contract Administration

Lead Services

- Inspections
- Lead Risk Assessments
- Project Management
- Air Monitoring

Mold Services

- Investigations
- Mold Remediation Design
- Moisture Detection and Solutions
- Building Condition Surveys
- Remediation Project Management
- Air Sampling

Industrial Contaminants

- Arsenic
- Silica
- Hexavalent Chromium
- Mercury
- Respirable Dust

Indoor Air Quality Assessments

- Carbon Monoxide
- Carbon Dioxide
- Hydrogen Sulfide
- Volatile Organic Compounds

Training

- 2-Hour Asbestos Awareness Training
 - Provided at lower cost with convenience and flexibility

Other Services

- Phase I Environmental Site Assessment
- Site observations and a review of the historical site usage and regulatory background.
